U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05)

Continuation of 11. does NOT place the application in condition for allowance because:

Arguments are not persuasive to overcome the rejections of claims 13-18 as anticipated by or as unpatentable over Chaudhari.

Regarding claim 13, Applicant argues that Chaudhari fails to disclose a mask that is "deformed in a plane perpendicular to the substrate". Although the examiner does recognize differences in the shape of the mask disclosed by Applicant and the mask disclosed by Chaudhari in Figures 3A and 4A, the proposed claim language fails to identify such a characteristic present in the invention that is not disclosed by Chaudhari.

To identify a reasonably broad interpretation of the term "deformed", Merriam Webster's Collegiate Dictionary, Tenth Edition provides the definition "distorted or unshapely in form; misshapen". A plane perpendicular to the substrate may be identified as the plane of the cross section view of Figures 3A and 4A of Chaudhari extending from the left side of the figure to the right side of the figure and from the top of the figure to the bottom of the figure. Within this plane, the gaps in the mask due to the edges and openings of the mask are interpretted as deformations.

Regarding claims 14, 15, 17, and 18, the examiner maintains that an "external force" for deforming the mask defines a product-by-process limitation such that the claim is only limited to the structure implied by the steps (MPEP 2113). In contrast to the characterization of statements from the Office Action made in Applicant's Remarks (Page 4), the claim is interpreted to limit the mask structure to being deformable by an external force to create the deformations. Given that the mask defined by Chaudhari does not occur by itself in nature, it is inherent that the mask deformations be deformable by an external force. Similarly, the examiner maintains the mask as dynamically deformable.
